DKI Jakarta, Indonesia

Software Engineer focused on building scalable and maintainable digital products. Strong experience in Kotlin-based development, system architecture, and modern UI frameworks. Experienced in designing clean, modular systems with emphasis on performance, automation, and long-term sustainability. Currently exploring cross-platform and orchestration-based solutions to build efficient, future-proof software ecosystems

Education Level

Universitas Gunadarma – Bekasi, Indonesia

Sep 2021 – Sep 2025

Bachelor of Informatics, 3.94 / 4.00

Work Experiences

Alfagift - Global Loyalty Indonesia - Tangerang, Indonesia

Android Engineer

Feb 2026 – Present

- Architected and developed an enterprise-grade real-time Chat SDK from the ground up using MQTT as the underlying messaging protocol, enabling event-driven communication with low-latency message delivery at scale.
- Designed the SDK architecture following Screaming Architecture principles at the module level, ensuring high readability and domain-driven structure — allowing consumer teams to integrate and extend the SDK with minimal onboarding friction.
- Implemented an OTA (Over-the-Air) feature toggle mechanism backed by a custom internal service API, enabling dynamic enable/disable control of chat features without requiring app updates — reducing release risk and improving operational flexibility.
- Engineered the SDK for plug-and-play adoptability, abstracting internal complexity so end consumers can integrate real-time chat capabilities similar to using a ready-made third-party library.
- Contributed to the end-to-end delivery of the Chat SDK's initial production release, actively participating across development, QA testing cycles, and pre-release validation stages in coordination with the tech lead and QA team.

Android Engineer Intern

Feb 2025 – Feb 2026

- Developed an interactive loyalty and rewards feature to improve user engagement and support customer retention within a large-scale grocery application.
- Implemented a 21+ age-restricted product verification system to ensure compliance with government regulations and maintain application eligibility in the market.
- Conducted R&D on an AI-powered shopping assistant to enhance user experience and support digital innovation initiatives.
- Led research and implementation of a centralized localization system using Localazy to improve multi-language translation management across platforms.
- Managed feature delivery timelines using project management tool, ensuring task tracking, review cycles, and on-time completion aligned with sprint deadlines.
- Authored comprehensive Technical Specification Documents (TSD) for each feature to ensure scalability, maintainability, and smooth knowledge transfer.

Lembaga Pengembangan Komputerisasi Gunadarma - Jakarta, Indonesia

IT Infrastructure Support Engineer

Sep 2024 – Jan 2026

- Managed 7 servers, 144 thin clients, and virtual machines using VMware/vSphere, ensuring optimal performance and uptime.
- Administered user accounts, access controls, and system reliability for seamless operations.
- Updated course materials on Moodle, organized content on "Activity," and maintained hardware across training facilities.

Course Instructor

Apr 2024 – Jan 2026

- Taught programming languages (Go, Java, Delphi, PHP) through engaging lectures and hands-on training projects.
- Designed course materials and provided mentorship, guiding students through coding challenges and project development.
- Evaluated student performance, offering constructive feedback to foster improvement and skill proficiency

Lembaga Layanan Pendidikan Tinggi Wilayah III - Jakarta, Indonesia

Sep 2024 – Jan 2025

Mobile Developer - Community Service Project

- Designed and developed an Android app featuring parenting modules, community platforms, and expert consultations to support human resource development.
- Conducted field research and gathered feedback from 80% of community members and village officials, refining app features to better meet local needs.
- Collaborated remotely and on-site, ensuring 100% on-time project delivery while addressing local challenges effectively.

Project-Based Virtual Intern: Mobile Apps Developer Bank Mandiri x Rakamin Academy

- Completed an intensive internship program in Kotlin and API integrations with an 84.75% proficiency score.
- Recognized with a Certificate of Achievement for technical proficiency, ranking in the top 10% of the cohort.
- Developed a news application with NewsAPI integration, increasing user engagement by 50% during testing

Skills, Achievements & Other Experience

- **Badan Nasional Sertifikasi Profesi** ✓ (2024) – Junior Mobile Programmer issued by Badan Nasional Sertifikasi Profesi
- **Rakamin** ✓ (2024) – Certificate of Achievement issued by Bank Mandiri Mobile Apps Developer Project Based Internship Program
- **Dicoding** ✓ (2024) –SOLID Programming Principles issued by Dicoding Indonesia
- **Dicoding** ✓ (2024) – Machine Learning Implementation on Android Application Issued by Dicoding Indonesia
- **Dicoding** ✓ (2024) – Intermediate Android Application Development Issued by Dicoding Indonesia
